Treatment Planning Course Outline

Course Summary: This course will provide a thorough description of treatment plan development, establishing short-term, concrete, do-able goals & objectives that help move your client forward in treatment and in their recovery journey. This course also provides details of how to create a needs list and the importance of the bio-psychosocial in informing that list. Lastly, but probably most importantly, this course will help guide you in establishing rapport, creating a trusting treatment alliance that enables the necessary collaboration between your client and you in formulating the treatment plan.

Course Goals:

1. Student will be able to define and create an integrated individualized treatment plan.
2. Student will be able to define and create an integrated co-occurring individualized treatment plan.
3. Student will learn to create and utilize a client needs/problem list in creating an individualized treatment plan.
4. Student will understand the application and use of the ASAM in formulating the treatment plan.
5. Student will understand the application and use of the stages of change in formulating a treatment plan.
6. Student will understand how to use and apply intervention strategies in helping clients achieve their goals and objectives.
7. Student will learn to create short term achievable goals and objectives.
8. Student will learn various clinical techniques to engage clients in the treatment planning process.
